Pinnacle Results conducted a Study on a large, tight-gas field, located in northeast British Columbia,

During early project stages, an integrated Value Management and Decision Analyses approach leads to a better understanding of the business (project) opportunity and allows the Project Team to develop a viable and compelling project execution plan for Management consideration. At strategic points during the early project cycle, the concepts of Analyses of Function was utilized to frame the functional (organizational) work requirements, which delivers a rigorous “Investment Support File”. Consequently, Management will be able to make informed choices about major capital investment and understand the Quality of the Decision being made.

The resulting “planning map” allowed the multi-discipline project team to identify pertinent obligations (project) and provided “clarity of roles & accountabilities” for the team.

Study Objectives

- Understanding Mutual Project Schedule imperatives.
- Understanding Mutual Project Interfaces.
- Identify Tactical decisions in Select stage, Technology selected for design activities.
- Potential Schedule Risk.
- Setting Business Priorities
- Individual & Mutual Roles & Accountabilities.
- Identifying various Stakeholders
- Identifying Internal & External resources

Study Outcome

- A “Team-Developed” and Shared Understanding of a ‘Technical and Business Frame’
- A common understanding of the major Technical and Decision Sets
- Defined the scope and boundaries of the Noel Tight Gas opportunity
- Understanding of the potential Technical options and alternative concepts defined and the appropriate level to which they should be worked to make a funding decision.
- Identified Key Appraise issues, potential relationships identified
- Clear understanding of Roles. Accountabilities, Interface Imperatives and Milestones.
